

Hot Fix Transfer Tape

For Making Designs and Motifs of your own

BEWARE: THIS METHOD PRODUCES A MIRROR IMAGE OF YOUR DESIGN.

Design your transfer either through freehand on tracing paper or on a computer using a graphics package. Check the size.

Invert the graphics by turning the paper over or by using the mirror feature in the graphics package

Print and tape the paper onto a flat surface such as a table

Peel and tape the transfer film on top of the design **sticky side up** so that the pattern shows through

Using tweezers apply the stones to the sticky side of the transfer tape. Make sure the stones are glue side up. The flat back of the stone facing up.

Once you have finished applying your stones your motif is now ready to apply to the garment

Unfix the motif ready to apply to the garment

Invert and place the motif sticky side down onto the garment. The flat backed glue is now touching the garment

Place a pre-heated iron on the film and let it remain in place for several seconds. Use a cloth to protect your iron and create a uniform heating surface. Move the iron as needed to cover the entire design.

Allow to cool and slowly peel back transfer tape. If stones have not glued then re-cover and apply more heat.

This method produces a mirror image. So any writing needs to be reversed. You could do this by using tracing paper and then turn it upside down and tape to the table.

There are other ways to create motifs but for the home user this is best.

That's it! Have fun!!!!
